

Submersible Seawater Pumps

Titanium

TM

Amazingly versatile

- Pumping seawater out the bilge and pits of vessels;
- Circulating seawater in the fish reserves of restaurants and fishing boats;
- Supplying seawater to fish reserves and fish reserve tank trucks.

● Cleaning the deck of a fishing boat.

● Circulating seawater in the reserve of a crab dealer.

● Supplying seawater to a prawn farm.

The TM-series revolutionizes seawater pumping operation

Special Features

Titanium is an ideal marine pump material for its superb corrosion resistivity but has been little used because it's expensive.

Tsurumi's Marinemate submersible seawater pumps have resolved the price problem by combining titanium with resin for their strategic components.

This has added more virtues: lighter, tougher and stronger to stand corrosion than conventional equivalents.

Titanium in all wet parts

Titanium is used in all the wet metal parts of Marinemate pumps. Titanium has a far stronger oxide film on its surface than stainless steel does. This prevents the pumps from being corroded in the seawater which has a very high chlorine ion concentration.

Know-how in every part

The Tsurumi's unique know-how and concepts are utilized in every part of the pump such as, anti-wicking cable entry, motor protection device, and dual inside mechanical seal, etc. which have been well proven in the reliability and durability.

Construction materials of pump body

- Titanium
- Resin

Corrosion tests (6 months)
